

Ope-Trainer for incisional and sutural practice

Ope-Trainer is developed for various incision and suture practice to experience the feeling and technique, made of three-layers presuming the gingivae, periosteum and alveolar bone. The base is transparent in order to evaluate the results after practice.

Each thickness is made as follows.

- Gingivae is 2.0 mm.
- Alveolar bone(Transparent support base) is 2.0 mm.
- Periosteum is 0.3 mm

Transparent base

For practice of various incision and suture methods.

Support base presumed the alveolar bone is transparent to check easily whether it is sutured properly from the bottom side.

ADEM® is an Advanced Dental Education Module used for dental manikin training.
